

# New Product Introduction

IT'S HERE NOW.

## THE NEW 10MM FROM SMITH & WESSON

While everyone was talking about building a practical, durable, shootable 10mm pistol, we went ahead and built one. And it has all the advantages that led your customers to start thinking about this new caliber in the first place.

For your law enforcement customers, it offers optimal target penetration and expansion, and high capacity to match that power--plus all the other features that have made S&W Third Generation pistols the choice of more than 850 major agencies in just 12 months.

Sport shooters will also appreciate the 1006's built-in accuracy, extremely smooth double ac-

tion trigger pull, and the three dot adjustable or fixed Novak Lo Mount Carry rear sight.

All these qualities are included in a stainless steel package that weighs only 38 ounces, yet offers superior recoil-taming balance and advanced ergonomics. Other features include a straight backstrap (curved backstrap is optional), a fillet radius, and reversible magazine catch capability.

And, like all new S&W pistols and revolvers, the 1006 is protected by our Lifetime Service Policy.
